Response to Amendment

1. The amendment received 8/20/07 has been entered in full.

Response to Arguments

2. Applicant's arguments, see pages 7-11, filed 8/20/07, with respect to the rejections of claims have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new grounds of rejection is made in view of USC 101 as discussed below.

Claim Objections

3. Claim 1 originally disclosed the word approximate representation on line 3. However in the amended claims line 5 is shown as not being amended and contains the word appropriate in place of approximate. As this word has been shown to be in unamended format it should be put back as approximate as it was in the original claims. Appropriate correction is required.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-24 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-24 recite functional descriptive material. However, the process described in the claims merely manipulates data or an abstract idea, or merely solves a mathematical problem without a limitation to a practical application. A practical

Art Unit: 2624

application exists if the result of the claimed invention is “useful, concrete and tangible” (with the emphasis on “result”)(Guidelines, section IV.C.2.b). A “useful” result is one that satisfies the utility requirement of section 101, a “concrete” result is one that is “repeatable” or “predictable”, and a “tangible” result is one that is “real”, or “real-world”, as opposed to “abstract” (Guidelines, section IV.C.2.b)). Claims 1-24 merely manipulates data without ever producing a useful, concrete and tangible result.

In order to for the claimed product to produce a “useful, concrete and tangible” result, recitation of one or more of the following elements is suggested:

- The manipulation of data that represents a physical object or activity transformed from outside the computer.
- A physical transformations outside the computer, for example in the form of pre or post computer processing activity.
- A direct recitation of a practical application;

It is the result that is the focus. If the result has a real world practical application/use, then the test has been satisfied. The claim need not include the uses to which the result is ultimately put, just the result itself. Applicant is advised to provide a written explanation of how and why the claimed invention (either as currently recited or as amended) produces a useful, concrete and tangible result.

6. Claim 22 is further rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 22 claims a computer program embodying functional descriptive material. However, the claim does not define a computer-readable medium or computer-readable memory and is thus non-statutory for that reason (i.e., "When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized" – Guidelines Annex IV). The scope of the presently claimed invention encompasses products that are not necessarily computer readable, and thus NOT able to impart any functionality of the recited program. The examiner suggests amending the claim to be a computer readable medium embodying a computer program. Any amendment to the claim should be commensurate with its corresponding disclosure.
